(54) Title of the Invention: Double optical connector structure

[Claims]

[Claim 1] A double optical connector constructed by a receptacle for transmission and reception and a plug for transmission and reception to be assembled into the receptacles,

wherein in the receptacle, the plug for transmission and reception is sandwiched with two sleeves, a pair of module holders is removably assembled into the sleeve, one side of each blade for abutting the pair of module holders is notched to be made into a straight part, and the module holder is assembled by connecting the straight parts themselves.

[Brief Description of the Drawings]

[Fig. 1] Fig. 1 is a top cross-sectional view showing an embodiment of the invention.

[Fig. 2] Fig. 2 is a perspective view showing the embodiment of the invention.

[Fig. 3] Fig. 3 is a schematic view showing the structure of a module holder according to the embodiment of the invention.

[Fig. 4] Fig. 4 is a schematic view showing the structure of a plug according to the embodiment of the invention.

[Fig. 5] Fig. 5 is a schematic view showing the structure

of a conventional FC type optical connector on the receptacle side.

[Fig. 6] Fig. 6 is a side view showing the structure of the conventional FC type optical connector on the plug side.

[Fig. 7] Fig. 7 is a schematic view showing the structure of a conventional SC type optical connector on the receptacle side.

[Fig. 8] Fig. 8 is a perspective view showing the structure of the conventional SC type optical connector on the plug side.
